Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Ig gamma-1 chain C region - C; Species: synthetic synthetic

#sequence_revision 17-Mar-1997 #text_ #text_change 19-May-2000

submitted to the EMBL Data

A; Description: Screeing ata Library, February 1993 method for protein-protein interactions of cloned gene

A; Cross-references: EMBL: x70421; NID: g33068; PIDN: CAA49866.1; PID:g33069

C;Keywords: immunoglobulin F;1-22/Region: Escherichia coli outer membrane F;23-255/Region: human Ig gamma-1 chain C regio chain C region protein Þ precursor

Similarity Conservative 96.6%; Score 1217; DB 4; Pred. No. 1.1e-85; Length Indels 0; Gaps

0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        င္ပ
A;Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interch A;Note: this protein lacks most of the V region and all of the CH1 region. Residue 12 A;Note: the sequence of residues 42-76 was taken from the reference that follows R;Michaelsen, T.E.; Franglone, B.; Franklin, E.C.

A:Note: Cys-105, Cys-107, and Cys-110 form inter-heavy chain bonds
A:Note: Cys-105, Cys-107, and Cys-110 form inter-heavy chain light guinea pigs.
C:Comment: This chain was isolated from pooled serum of strain 13 inbred guinea pigs.
C:Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into la C:Superfamily: immunoglobulin cregion; immunoglobulin homology
C:Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin consists immunoglobulin homology <IMIS

          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                  1128
